Blue light-induced, intrinsic vacuolar fluorescence in onion guard cells.

On the differential divisions and preprophase microtubule bands involved in the development of stomata of Vigna sinensis L.

Mechanism of cleavage of newt eggs.

An ultrastructural study of the effects of wheat germ agglutinin (WGA) on cell cortex organization during the first cleavage of Xenopus laevis eggs. I. Inhibition of furrow formation.

An ultrastructural study of the effects of wheat germ agglutinin (WGA) on cell cortex organization during the first cleavage of Xenopus laevis eggs. II. Cortical wound healing.

Fine structure of meiotic prophase chromosomes and modified synaptonemal complexes in diploid and triploid Rhoeo spathacea.

Probing the free space within rat and chicken chromatin with active and passive probes.

Transfer of mouse nuclear envelope specific proteins to nuclei of chick erythrocytes during reactivation in heterokaryons with mouse A9 cells.

Analysis of the time of utilization of proteins for the initiation and completion of division in synchronized Tetrahymena pyriformis.

Increase in macromolecular amounts during the cell cycle of Tetrahymena: a contribution to cell cycle control.

An experimental analysis of bivalent interlocking in spermatocytes of the newt Triturus vulgaris.

Survival of cells implanted in the embryonic chick limb bud: a difference between normal and malignant rat brain cells.

A ligand-receptor model for the cohesive behaviour of Dictyostelium discoideum axenic cells.

Motility of the axenic cells: a direct correlation between interference-reflexion and indirect-immunofluorescence microscopy on myogenesis and myotube integrity in rat skeletal muscle cultures.

A bloometric study of the interaction between Trypanosoma cruzi and rat eosinophils, neutrophils and macrophages in vitro.

A contribution to cell cycle control.

An increase in macromolecular amounts in vitro and rat eosinophils, neutrophils and macrophages in vitro.

A direct correlation between interference-reflexion and indirect-immunofluorescence microscopy using antibodies against actin and α-actinin.

A morphological study of the interaction between Trypanosoma cruzi and rat eosinophils, neutrophils and macrophages in vitro.

Capping of variable antigen on Trypanosoma brucei, and its immunological and biological significance.

Cell-to-substratum contacts in living cells: Antibody staining of 10-nm (100-Å) filaments in cultured smooth, cardiac and skeletal muscle cells.

Actin in spindles of Haemanthus katherinae endosperm. I. General results using various glycerination methods.

Actin in spindles of Haemanthus katherinae endosperm. II. Distribution of actin in chromosomal spindle fibres, determined by analysis of serial sections.

Topographical variations in the structure of the smooth septate junction.

Mechanical tension produced by nerve cells in tissue culture.

Interpolation of microtubules into cortical arrays during cell elongation and differentiation in roots of Azolla pinnata.
