Identification of a microfilament-enriched, motile domain in amoebiform flagellates of Physarum polycephalum

Rapid cellular translocation is related to close contacts formed between various cultured cells and their substrata

Surface contraction waves in amphibian eggs

Cell shape and organization of cytoskeleton and surface fibronectin in non-tumorigenic and tumorigenic rat liver cultures

DNA repair synthesis in subpopulations of human lymphocytes

Qualitative and quantitative differences in spreading of human fibroblasts on various protein coats. Modulation by treatment of the cells with amines

Protein and glycoprotein synthesis by Friend erythroleukaemic cells during erythropoiesis differentiation

Effects of organic solvents on flagellar asymmetry and quiescence in sea urchin sperm

Age-associated change in macronuclear DNA content in Paramecium caudatum

Nuclear crystalloids in sieve elements of species of Echium (Boraginaeae)

The course of the acrosome reaction in guinea-pig sperm

Cell volume and the control of the Chlamydomonas cell cycle

Localization of mitotic factors on metaphase chromosomes

A critical evaluation of Bernhard's EDTA regressive staining technique for RNA

The apparent inducibility of tumour marker glycoproteins in a melanoma cell line selected for growth in low levels of glucose

The spreading of Dictyostelium amoeba and the formation of ultrathin cytoplasmic lamellae

Substratum wettability and charge influence the spreading of Dictyostelium amoeba and the formation of ultrathin cytoplasmic lamellae

Interaction between intracellular vacuoles and the cell surface analysed by finite aperture interference reflection microscopy

Cell–glass separation depends on salt concentration and valency: measurements on Dictyostelium amoebae by finite aperture interferometry

Ultrastructure of nuclemorph division in species of Cryptophyceae and its evolutionary implications

Sensory behaviour in Dictyostelium discoideum slugs: phototaxis and thermotaxis are not mediated by a change in slug speed

Anatomy of the unpollinated and pollinated watermelon stigma

Fibronectin, intercellular junctions and the sorting-out of chick embryonic tissue cells in monolayer
