Fibronexus formation is an early event during fibronectin-induced restoration of more normal morphology and substrate adhesion patterns in transformed hamster fibroblasts.

Unrelated surface control of commitment to growth and attachment in isolated adult rat hepatocytes.

Migration of cultured vascular cells in response to plasma and platelet-derived factors.

Changes in the size and structure of the nucleolus of columnar cells during their migration from crypt base to villus top in rat jejunum.

The analysis of malignancy by cell fusion. IX. Re-examination and clarification of the cytogenetic problem.

The motive force of the migrating pseudoplasmodium of *Dictyostelium discoideum* under dark and light conditions.

The relationship between endocytosis of concanavalin A and phytohaemagglutinin receptors and blast transformation, and direct identification of individual rabbit lymphocytes reactive to both mitogens.

Polyacrolein microspheres as a new tool in cell biology.

Interaction of hyaluronate with the surface of simian virus 40-transformed 3T3 cells: aggregation and binding studies.

Spreading of blastomeres from eight-cell mouse embryos on lectin-coated beads.

Movement and guidance of migrating mesodermal cells in *Ambystoma mexicanum* gastrulae.

Effects of cyclic AMP on contact formation and differentiation in *Dictyostelium discoideum*.

Biliary secretion of sodium fluorescein in primary monolayer cultures of adult rat hepatocytes and its stimulation by nicotinamide.

Stages in the assembly of pleated and smooth septate junctions in developing insect embryos.

Ascospore development in the fission yeasts *Schizosaccharomyces pombe* and *S. japonicus*.

In vitro proliferation and lifespan of bovine aorta endothelial cells: response to conditioned media.

Proplastid DNA synthesis at pachytene in pollen mother cells of *Lilium henryi*.

A model for a quantitative study of cell adhesion.

Effects of inhibitors and activators of eosinophil function with immobilized immune complexes.

Mechanism of Fc-mediated interaction of eosinophils with immobilized immune complexes.

Effects of inhibitors and activators of eosinophil function.

Identification of two membrane proteins, modified by lectin-coated beads.

Mechanisms of Fc-mediated interaction of eosinophils with immobilized immune complexes. II. Identification of two membrane proteins, modified by the interaction.

Mechanism of entry and development of *Trypanosoma dionisi* in non-phagocytic cells.

An ultrastructural study of the interaction in *in vitro* between *Trypanosoma theileri* and bovine leucocytes.

High-resolution scanning electron microscopy of human metaphase chromosomes.

A survey of DNA repair incision activities after ultraviolet irradiation of a range of human, hamster, and hamster-human hybrid cell lines.

Mosaic structure in the plasma membrane: spiral arrays of subunits in the cytoplasmic tubules of lamprey chloride cells.

Nuclear transplant studies on the reduction in numbers of presumptive germ nuclei in *Paramecium caudatum*.

Infiltration of lymphosarcoma cells into hepatocyte cultures: inhibition by univalent antibodies against liver plasma membranes and lymphosarcoma cells.

Their geometry relative to cell form, surface contours and ciliary organelles.

Nuclear fusion in wheat.
