WILSON, PATRICIA A., HENRIKSON, R. C. and DOWNES, A. M. Incorporation of $[\text{Me}^3\text{H}]$-methionine into wool follicle proteins: a biochemical and ultrastructural study 489

WOLPERT, L., MARSLAND, D. and HIRSHFIELD, M. The effect of high hydrostatic pressure on the mechanical properties of the surface of the sea-urchin egg 87

WOODCOCK, C. L. F. The anchoring of nuclei by cytoplasmic microtubules in Acetabularia 611
GENETICS Second Edition
By Robert Paul Levine, Harvard University
The Second Edition of this well-known text analyzes the nature, transmission, and function of genetic material. The work has been expanded to include protein synthesis and its regulation, the genetic system of Escherichia coli, and additional problems. Such subjects as mutation, recombination, complementation, and the role of cytoplasm in heredity have been brought up to date. The balance between the classical and molecular aspects of genetics has been retained.
1968 / 224 pages / $4.15 paper
Modern Biology Series

STRUCTURAL CONCEPTS IN IMMUNOLOGY AND IMMUNOCHEMISTRY
By Elvin A. Kabat, Columbia University
To introduce students of biology, biochemistry, and medicine, to immunology and immunochimstry, this text develops the subject from a structural chemical approach, pointing out similarities to reactions involving other macromolecules. Included in the text are discussions of the basic design of immunochemical experimentation, antibody heterogeneity, and the sequences of immunoglobulin chains.
1968 / 320 pages / $7.50 paper / $11.75 cloth
Molecular and Cellular Biology Series

DNA AND CHROMOSOMES
By Ernest J. DuPraw, University of Maryland
This book is unique in presenting micrographs and other information about chromosomes from the entire spectrum of living creatures: viruses, bacteria, protozoa, algae, plants, animals, and humans. Human chromosomes are featured. As a unifying theme, the properties of chromosomes are related to, and in some cases derived from, the properties of long DNA molecules.
1970 / 352 pages / $7.25 paper / $10.50 cloth
Molecular and Cellular Biology Series

CELL AND MOLECULAR BIOLOGY: An Appreciation
By Eugene Rosenberg, University of California, Los Angeles
An introduction to cell and molecular biology, this text is specifically designed for the not-yet-specialized-student. Emphasized are the reasoning behind each idea and the critical experiments performed to test them. Elementary chemistry is developed in the first chapter on the origin of life, and rather than simply presenting a dogmatic approach, the historical experimental background to the DNA-RNA-Protein story is developed. One full chapter is devoted to the presentation of the best available photomicrographs of tissues, cells, and viruses.
1970 / 225 pages / $4.00 paper

CELL STRUCTURE AND FUNCTION
Second Edition
By Ariel G. Loewy, Haverford College, and Philip Siekevitz, The Rockefeller University
The emphasis of this best-selling work is on correlating structure and function and demonstrating how the major advances in modern cell biology have been achieved through an integration of structure and function, especially at the molecular level. Included are such topics as photosynthesis, allosteric regulation of enzymes, and sequence determination of nucleic acid. Many electron micrographs, charts, graphs, and many drawings, in color, enhance the text.
1969 / 528 pages / $7.25 paper

CELLS AND ORGANELLES
By Alex B. Novikoff, Albert Einstein College of Medicine, Yeshiva University, and Eric Holtzman, Columbia University
Using an analytic framework which unifies both classical and modern approaches to cell biology, the authors have drawn evidence from such areas as molecular biology, cytochemistry, bacterial genetics, embryology, and evolution to describe the current concepts of cell biology and the experiments that have led to these concepts.
1970 / 352 pages / $6.25 paper

INFORMATION FOR CONTRIBUTORS

2 Manuscripts must be typewritten, in double spacing throughout (including tables, references and legends). Each table should be typed on a separate sheet. Legends to figures should be typed in a single series and placed at the end of the manuscript. Papers must be fully corrected by the author, and a charge will be made for excessive alteration in proof.

3 A short title of not more than 40 characters, for use as page headings, should be supplied if the full title is longer than this.

4 Manuscripts must contain a Summary of not more than 500 words, placed immediately after the title page. Contributors should also send three copies of an Abstract for distribution to abstracting journals. The abstract must not be more than 100 words long and should be headed by the author's name and address and the title of the paper. Both summary and abstract must be intelligible without reference to the main text.

5 The list of References must be given in alphabetical order of authors' names. The titles of journals should be abbreviated in accordance with the *World List of Scientific Periodicals*, 4th ed. (1963). The following style is used:

Citations in the text are given in the following form: Jones & Smith (1960) or (Jones & Smith, 1960). Where there are more than two authors the first citation should include all the names and subsequent citations should be in the form (Jones *et al.* 1960). Where more than one paper by the same author(s) have been published in the same year they are cited as Jones (1960a), Jones (1960b) etc.

6 Text figures should preferably be drawn about twice final size; very large drawings should be avoided. Photographic reproductions of drawings cannot always be satisfactorily reproduced. The maximum printed size of a drawing is 200 mm by 125 mm. Lettering will be inserted by the printers and should be indicated on drawings in faint blue pencil or on a tracing-paper overlay. It should be in lower case, and abbreviations should not be used if there is space for complete words.

7 Photographs should preferably be submitted the same size as they are to appear. The maximum area for a plate is 210 mm by 140 mm. Where several photographs make up a plate they should be accurately mounted on one sheet of cardboard. Irregularly shaped photographs or plates should be avoided wherever possible. Lettering on plates will be inserted by the printers and should be indicated either on a duplicate, marked set of prints or on a tracing-paper overlay bearing accurately marked outlines of the objects indicated. Authors may be asked to contribute to the cost of plates in excess of four.

8 Text figures and photographs should be numbered in a single series, all text figures preceding the photographs. Each individual drawing or photograph should be numbered separately (Fig. 1, Fig. 2 and so on).

9 SI units should be used throughout in the preparation of manuscripts.

10 Authors will receive 50 offprints free of charge and may order additional copies when proofs are returned.
