Contents
Information for contributors

1 Manuscripts should be sent to The Editors, Journal of Cell Science, Department of Zoology, Cambridge CB2 3EJ, England. Contributors in Canada and USA may send their manuscripts to Dr Gary Borisy, Journal of Cell Science, Laboratory of Molecular Biology, University of Wisconsin, 1523 Linden Drive, Madison, Wisconsin 53706. (Bitnet number: BORISY@WISCMACC.)

2 Manuscripts should be in English and as concise as possible. They must be typewritten, in double spacing throughout (including tables, references and legends) on one side of the paper only. Each table should be typed on a separate sheet. Legends to figures should be typed in a single series and placed at the end of the manuscript. Three complete copies of the manuscript should be submitted. Authors should retain a complete copy of the final version of their manuscript. Manuscripts must be fully ready for publication; in the interests of rapid publication it will not normally be possible to make alterations in proof other than the correction of typographical errors.

3 (a) Word-processor disks. Journal of Cell Science can use your disk (5½ or 3½") instead of rekeying the accepted article. If available please send a copy of the disk with your final revised manuscript (disk will be returned).

   Please observe the following instructions
   1. Create and/or edit your manuscript, using the document mode (or equivalent) in the word-processor program.
   2. Use only underline (or italic), bold, subscript and superscript. Multiple font, style or ruler changes, or graphics inserted into the text, reduce the usefulness of the disk.
   3. Do not right-justify your text.
   4. Do not use footnotes.
   5. Use paragraph indents.
   6. Leave a blank line before and after all headings, which should be underlined.
   7. Distinguish the numerals 0 and 1 from the letters O and I.
   8. Also include an ASCII file on your disk (file without control commands).

   Apple Macintosh disks. We can read standard 400k and 800k disk formats. Please place the file in the root directory (do not use folders) and save your file in MacWrite format if your word processor allows it, or has a translator utility.

   BBC micro. If possible, send your file in ADPS format.

   (b) Automatic text scanning. If you have no disk it may be possible for us to ‘scan’ your manuscript (not photocopies) using a ‘Text scanning system’.

   Please ensure your manuscript is free from pen/pencil marks. Any alterations should be marked on a photocopy of your manuscript.

   We cannot accurately scan manuscripts if the underline rule touches the descending characters. If possible please provide another manuscript without using this facility.

4 A short title of not more than 40 characters, should be supplied and at least 3 key words for indexing papers.

5 Manuscripts must contain a Summary of not more than 500 words, placed immediately after the title page. This must be intelligible without reference to the main text and must contain no references.

6 The list of References must be given in alphabetical order of authors’ names. The titles of journals should be abbreviated in accordance with the World List of Scientific Periodicals, 4th edn (1968) and Short Titles of Commonly Cited Scientific Journals, Royal Society, London (1980). The following style is used:

Citations in the text are given in the following form: Jones and Smith (1960) or (Jones and Smith, 1960). Where there are more than two authors citations should be in the form (Jones et al. 1960). Where more than one paper by the same author(s) has been published in the same year they are cited as Jones (1960a), Jones (1960b) etc.

7 Footnotes should be avoided wherever possible.

8 SI units should be used throughout in the preparation of manuscripts.

9 Illustrations: general. All figures, whether line drawings or micrographs, should be numbered in a single series, in the order in which they are referred to in the text. Each figure should be numbered separately (Fig. 1, Fig. 2, etc.); where a figure has several parts use capital roman letters (Fig. 1A, 1B, etc.). The maximum printed size for illustrations is 235 mm × 175 mm. In general, figures should not exceed in size about one-half of this. Whenever possible, plan illustrations so that, either singly or grouped together, they will be the width of a whole page (165 mm) or a single column (81 mm).

10 Line drawings. Original drawings, in black India ink, should be submitted for reproduction, as photographic copies cannot always be used. They should not be more than twice column width.

11 Micrographs should be submitted the same size as they are to appear. Where several micrographs are grouped together they should be mounted accurately on mounting board. Irregularly shaped micrographs should be avoided.

12 Labelling on figures may be inserted by authors provided it conforms to the general style and size used by the journal. Alternatively, it may be inserted by the printer, in which case labelling should be indicated either on a duplicate, marked set of figures or on tracing paper overlays bearing accurately marked outlines.

13 Colour plates can be reproduced at the discretion of the editors and will be printed free of charge if they are judged essential. Authors should note that, apart from being expensive, colour plates add significantly to the production time of the journal.

14 Authors should retain a complete set of labelled figures for checking against proofs. The originals will not be returned to authors with proofs.

15 Authors will receive 200 offprints free of charge and may order additional copies when proofs are returned.

Copyright and reproduction

1 In order to give The Company of Biologists Limited authority to deal with matters of copyright, authors will be required to assign to them the copyright of any article published in the journal.

2 Authors may make copies of their own papers in this journal without seeking permission from The Company of Biologists Limited, provided that such copies are for free distribution only: they must not be sold.

3 Authors may re-use their own illustrations in other publications appearing under their own name, without seeking permission.

4 Specific permission will not be required for photocopying copyright material in the following circumstances:

(a) For private study, provided the copying is done by the person requiring its use, or by an employee of the institution to which he/she belongs, without charge beyond the actual cost of copying.

(b) For the production of multiple copies of such material, to be used for bona fide educational purposes, provided this is done by a member of the staff of the university, school or other comparable institution, for distribution without profit to student members of that institution, and provided the copy is made from the original journal.

5 For all other matters relating to the reproduction of copyright material written application must be made to Dr R. J. Skaeer, Company Secretary, The Company of Biologists Limited, Department of Zoology, Downing Street, Cambridge CB2 3EJ, UK.
CELL CYCLE ANALYSIS AND
REGULATION OF EARLY EMBRYOGENESIS
A Practical Course Using Cells of Marine Organisms

International Laboratory of Marine Cell Biology (LIBM)

ILE D’YEU, FRANCE
SEPTEMBER 2nd–14th, 1991

The course is intended to familiarize young scientists, especially of the Eastern countries, with new experimental concepts and approaches to an analysis of single events of the cell cycle and early embryogenesis presenting cell systems such as the sea urchin, star fish, ascidia, etc. At the same time it will offer for single cells the latest progress in image analysis, microinjection and ion measurements. It is essentially a practical course together with additional lectures and discussions.

Faculty: B. R. Brinkley (Birmingham, USA); A. Lambert (Strasbourg, FRANCE); D. Mazia (Pacific Grove, USA); R. Nobiling (Heidelberg, RFA); C. Petzelt (Ile d’Yeu, FRANCE); H. Sato (Nagano, JAPAN); G. Sluder (Boston, USA)

About 20 students will be accepted. The registration fee is FF 3000 (room and board not included). A limited number of fellowships is available, please apply as soon as possible (C.V., reasons to attend the course, and if you absolutely need support to attend the course).

Further information and application (please phone or Fax!):
Prof. Christian Petzelt, Laboratoire International de Biologie cellulaire Marine, LIBM, F-85350 Ile d’Yeu, France

THE CELL CYCLE

Edited by
Robert Brooks, Peter Fantes, Tim Hunt, Denys Wheatley

Journal of Cell Science Supplement 12 1989
Casebound, approx 300pp. $60 (£40) ISBN 0 948601 23 X

Contents:
Maturation promoting factor, Histone H1 kinase and the timing of mitosis.
Reports on yeast and higher eukaryote cycles from Nurse, Beach, Hyams, Reed, Doree, Maller and Co-workers.
The role of cyclin synthesis and destruction in the cell cycle.
Reports from the Murray, Hunt, Whitaker, Cross and Karsenti laboratories.
The role of DNA damage and DNA synthesis in the control of the cell cycle.
Reports from the Hartwell, Newport, Stillman, Roberts, Laskey and Hutchison groups.
Chromosomes, Centrosomes, Centromeres and Kinetochores.
Reports from Yanagida, Bloom, Hurt, Sluder and Glover.

The Cell Cycle is the most up to date analysis of new data and ideas on cell cycle regulation by most of the leading researchers in this rapidly moving and important field.

This indexed volume is based on the successful British Society for Cell Biology international meeting held in April 1989 at St Andrews, Scotland.

JOURNAL OF CELL SCIENCE
A major international journal of cell biology
12 monthly issues plus annual supplements (2 in 1991)

1991 subscriptions: Libraries – $870 (USA), £550 (Japan), £500 (rest of world)
New, lower price: personal subscription for individual use only – £75; $100 including postage and handling

24-hour ordering by FAX: (0206) 549331 – USA 44 206 549331

I would like to subscribe to Journal of Cell Science at the library ☐ or individual ☐ rate.
