Price 21s. net

Subscription per vol. £3. 3s.
CONTENTS

Structure and Synthesis of Nucleotides: B. Lythgoe &
A. R. Todd. The Biological Synthesis of Purine Com-
pounds: H. M. Kalckar. The Macromolecular Be-
aviour of Nucleic Acids: J. M. Gulland & D. O.
Jordan. X-Ray Studies of Nucleic Acids: W. T. Ast-
bury. The Distribution of Nucleic Acids in Tissues:
J. N. Davidson. Bacterial Nucleic Acids and Nucleo-
proteins: M. Stacey. A Study of Techniques for the
Cytochemical Demonstration of Nucleic Acids and
some Components of Proteins: J. F. Danielli. Ribonu-
cleic Acid and the Vital Staining of Cytoplasmic
Vacuoles in Animal Cells: P. Dustin, Jr. The Rela-
tions between Nucleic Acid and Protein Synthesis:
T. Caspersson. Protein and Nucleotide Metabolism
in the Nerve Cell under Different Functional Con-
ditions: H. Hydén. Nucleic Acid in Nerve-Cell Re-
generation: D. Bodian. Tissue Changes in Mice
Treated with Pentose Nucleotides: L. D. Parsons,
J. M. Gulland & G. R. Barker. Histochemical Ob-
servations on Nucleic Acids in Homologous Normal
and Neoplastic Tissues: R. E. Stowell. Nucleic Acids
in the Cell and the Embryo: J. Brachet. The Action
of Enzymes on Chromosomes: D. G. Catcheside &
B. Holmes. The Function of Deoxyribose-Nucleic
Acid in the Cell Nucleus: E. Stedman & E. Stedman.
Nucleic Acid and the Chromosomes: C. D. Darlin-
gton. The Experimental Modification of Nucleic Acid
Systems in the Cell: P. C. Koller.

LONDON, E.C.1
C. A. G. WIERSMA and ERNEST B. WRIGHT. The nature of the action potentials of crustacean muscles. (With Plates 7 and 8.)

J. W. L. BEAMENT. The formation and structure of the micropylar complex in the egg-shell of Rhodinus Prolixus Stahl. (Heteroptera reduviidae). (With Fifteen Text-figures.)

W. H. THORPE, A. C. CROMBIE, R. HILL, and J. H. DARRAH. The behaviour of wireworms in response to chemical stimulation. (With Plate 9 and Eleven Text-figures.)

LORD ROTHSCHILD. Spontaneous rhythmic impedance changes in the egg of the trout. II. (With Five Text-figures.)

ERNEST BALDWIN and VIVIEN MOYLE. An isolated nerve-muscle preparation from Ascaris lumbricoides. (With Five Text-figures.)

IVOR CORNMAN. The responses of onion and lily mitosis to coumarin and parasorbic acid. (With Plate 10.)

J. R. ERICHSEN JONES. The oxygen consumption of Gasterosteus aculeatus L. in toxic solutions. (With Ten Text-figures.)

PATRICIA ALLEN, F. W. ROGERS BRAMBELL, and IVOR H. MILLS. Studies on sterility and prenatal mortality in wild rabbits. I. The reliability of estimates of prenatal mortality based on counts of corpora lutea, implantation sites and embryos. (With Plate 11 and Three Text-figures.)

F. W. ROGERS BRAMBELL and IVOR H. MILLS. Studies on sterility and prenatal mortality in wild rabbits. II. The occurrence of fibrin in the yolk-sac contents of embryos during and immediately after implantation. (With Plates 12 and 13.)

A. T. PHILLIPSON. The production of fatty acids in the alimentary tract of the dog. (With Three Text-figures.)

ERIC PONDER. Disk-sphere transformations produced by lysins, and their reversal, in systems of different pH. (With Thirteen Text-figures.)

SYDNEY SMITH. Studies in the development of the rainbow trout (Salmo irideus). 1. The heat production and nitrogenous excretion. (With Five Text-figures.)

A. D. LEES. Transpiration and the structure of the epicuticle in ticks. (With Thirteen Text-figures.)
Controlled colour-rendering of the subject is of great importance in photomicrography to give emphasis to special features. Ilford Plates in conjunction with appropriate Ilford filters make such control a matter of certainty, whether the aim is the exaggeration of certain tones or the faithful rendering of colour and form.

NON-ORTHOCHROMATIC

Blue-sensitive emulsions which record wavelengths up to approximately 5000 A.U. Slow, fine-grained with high resolving power. Recommended:—
Ilford Process
Ilford Ordinary—16° Sch.

ORTHOCHROMATIC

A class of emulsion whose sensitivity has been increased to include green and some yellow to approximately 5800 A.U. Some yellow filters may be used where this form of control is desired. Medium speed and resolving power. Recommended:—
Ilford Chromatic—18° Sch.
Ilford Selochrome—30° Sch.

PANCHROMATIC

Emulsions which respond to wavelengths 3800—6600 A.U. Speeds from medium to extreme fast. Full control possible in conjunction with the full range of filters. Recommended:—
Ilford S.G. Pan.—28° Sch.
Ilford H.P.3—34° Sch.

For further details of Micro and other filters write for the free Ilford booklet “Ilford Colour Filters, Wedges and Safelights.”
MSE MICROTOMES

MSE Microtomes are highly efficient precision instruments of great rigidity. Their fine workmanship will be found equal to the most exacting demands of modern laboratory practice. Three well-known and thoroughly tried types are available. Full details gladly supplied on request to MSE, Ltd., 136-142 Victoria Street, London, S.W. 1.

Illustrated is the MSE Automatic Rotary ('Minot' type) Microtome, No. 9006, for fast serial sectioning.

JOURNAL OF THE
Marine Biological Association
OF THE UNITED KINGDOM

NEW SERIES VOLUME XXVI, No. 4 JUNE 1947

CONTENTS

Dr. Alec Sand, F.R.S.
A. C. Hardy and the late Lieut. W. Neil Paton. Experiments on the vertical migration of plankton animals.

Marie V. Lebour. Notes on the inshore plankton of Plymouth.

Marie V. Lebour. An interesting young Velella in the Plymouth plankton.

H. W. Harvey. Manganese and the growth of phytoplankton.

F. R. Hayes and D. Pelluet. The inorganic constitution of molluscan blood and muscle.

Alastair Graham and Vera Fretter. The life history of Patina pellucida (L).

W. J. Rees. A cercaria of the genus Haplocladus from Nucula (L). 

F. S. Russell. On the seasonal abundance of young fish. VIII. The year 1946, June to December.

N. J. Berrill. The ascidians Trididemnum alleni and Distaplia garstangi, new species from the Plymouth area.

N. J. Berrill. The development growth of Ciona.

 Notices of Books.

B.D.H. STAINS

for microscopical use

The B.D.H. Standard Stains are produced specifically for bacteriological, histological, pathological, zoological, and botanical work. Carefully controlled methods are employed in their preparation, and uniformity in the behaviour of different batches of material is guaranteed.

A new edition of the B.D.H. booklet, which provides a list of a variety of stains in solid form and in solution, together with sundry materials for microscopical work, and includes some general notes upon various standard methods of staining, will be published shortly. Applications for a copy are invited.

RECORDING TRANSIENT PHENOMENA

The behaviour of moving parts under actual working conditions may be studied by means of standard commercial oscillographs which translate mechanical or electrical variations into evanescent traces on a fluorescent screen. Avimo cameras record these traces on continuous film or paper, so that they may be subsequently checked, examined and measured. Write for Publication B2, giving full details.
