Retraction of: *J. Cell Sci.* **124**, 801–811.

The authors wish to retract this paper after it has come to their attention that the constructs of insulin receptor (IR) isoform A were of isoform B. This was discovered when the constructs were subcloned into retroviral vectors to be used in a different study. Thus the significant differences reported between IR-A and IR-B must be assumed to be erroneous and, in agreement with the *Journal of Cell Science* editorial policies, the paper must be retracted. A detailed comparison between certified IR-A and IR-B is being conducted and will be reported.

The authors apologise for not having detected the cloning error prior to publication and for any inconvenience caused.
