

Aspects of Human Biology

Theory Relevant to Medical Laboratory Sciences

Frank Spencer, FIMLT, AIST, ART
Hotel-Dieu Hospital, Windsor, Ontario

Human biology is presented here as an integrated subject with its many subdivisions – microbiology, biochemistry, cell physiology, etc. – shown in relation to each other and to the whole. It is written specifically for the student of medical laboratory technology, whose training often lacks emphasis on the theoretical foundations of modern biological science.

Animal Tissue Culture

Advances in Technique

Edited by G. D. Wasley, FIMLT
St Thomas's Hospital Medical School

Advances in tissue culture and its associated techniques have been extremely rapid in recent years. In this volume, the specialist contributors provide lucid descriptions of the recent techniques and methods applicable to their particular fields. With its essentially practical approach, the book will be of great value to medical technicians and post-graduate workers in cytology, virology and other biomedical subjects.

Chromosome Techniques

Theory and Practice

A. K. Sharma, DSc, FNA, University of Calcutta
and A. Sharma, DPhil, DSc, University of Calcutta

In recent years tremendous advances have been made in all aspects of chromosome methodology. Outstanding progress has been achieved in the fields of human and mammalian chromosome methodology, including the study of malignant cells and chromosomes in culture. Such techniques as mammalian chromosome analysis, somatic cell hybridisation, electron microscopy, high-resolution autoradiography and other modes of quantitation have revolutionised this area of research. The second edition has been completely revised to take in these advances and several new chapters have been added. Methods for qualitative, quantitative and ultrastructural analysis of chromosomes, both at the physical and chemical levels, are outlined, together with the necessary theoretical background.

Macrophages and Cellular Immunity

CRC Monoscience Series

The length of this monograph reflects the current interest in the topic of cellular immunity. The book includes four reviews from the CRC *Critical Reviews in Microbiology*. It gives an up-to-date account of recent studies in the subject.

INFORMATION FOR CONTRIBUTORS

1 Manuscripts should be sent to The Editors, *Journal of Cell Science*, Department of Zoology, Cambridge, England.

2 Manuscripts must be typewritten, in double spacing throughout (including tables, references and legends). Each table should be typed on a separate sheet. Legends to figures should be typed in a single series and placed at the end of the manuscript. Papers must be fully corrected by the author, and a charge will be made for excessive alteration in proof.

3 A short title of not more than 40 characters, for use as page headings, should be supplied if the full title is longer than this.

4 Manuscripts must contain a **Summary** of not more than 500 words, placed immediately after the title page. Contributors should also send three copies of an **Abstract** for distribution to abstracting journals. The abstract must not be more than 100 words long and should be headed by the author's name and address and the title of the paper. Both summary and abstract must be intelligible without reference to the main text.

5 The list of **References** must be given in alphabetical order of authors' names. The titles of journals should be abbreviated in accordance with the *World List of Scientific Periodicals*, 4th ed. (1963). The following style is used:

GRAY, E. G. & WILLIS, R. A. (1968). Problems of electron stereoscopy of biological tissue. *J. Cell Sci.* 3, 309-326.

MAZIA, D. (1961). Mitosis and the physiology of cell division. In *The Cell*, vol. 3 (ed. J. Brachet & A. E. Mirsky), pp. 77-412. New York and London: Academic Press.

Citations in the text are given in the following form: Jones & Smith (1960) or (Jones & Smith, 1960). Where there are more than two authors the first citation should include all the names and subsequent

citations should be in the form (Jones *et al.* 1960). Where more than one paper by the same author(s) have been published in the same year they are cited as Jones (1960*a*), Jones (1960*b*) etc.

6 **Footnotes** should be avoided wherever possible.

7 **SI units** should be used throughout in the preparation of manuscripts.

8 **Text figures** should preferably be drawn about twice final size; very large drawings should be avoided. Photographic reproductions of drawings cannot always be satisfactorily reproduced. The maximum printed size of a drawing is 200 mm by 125 mm. Lettering will be inserted by the printers and should be indicated on drawings in faint blue pencil or on a tracing-paper overlay. It should be in lower case, and abbreviations should not be used if there is space for complete words.

9 **Photographs** should preferably be submitted the same size as they are to appear. The maximum area for a plate is 210 mm by 140 mm. Where several photographs make up a plate they should be accurately mounted on one sheet of cardboard. Irregularly shaped photographs or plates should be avoided wherever possible. Lettering on plates will be inserted by the printers and should be indicated either on a duplicate, marked set of prints or on a tracing-paper overlay bearing accurately marked outlines of the objects indicated. Authors may be asked to contribute to the cost of plates in excess of four.

10 Text figures and photographs should be numbered in a single series, all text figures preceding the photographs. Each individual drawing or photograph should be numbered separately (Fig. 1, Fig. 2 and so on).

11 Authors will receive 50 offprints free of charge and may order additional copies when proofs are returned.
